DETAILED ACTION

Continued Prosecution Application

1. The request filed on 2/21/02 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 09/242014 is acceptable and a CPA has been established. An action on the CPA follows.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 6-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Widlund (5,454,804).

3. Widlund discloses a sanitary napkin (see figures 1-6) for wearing in the crotch portion of a pair of underpants (9), with longitudinal and transversal side edges (see figures 1 and 5), a wearer facing topsheet (1) and a garment facing casing backsheet (2), with flexible side flaps (4,5) that are intended to be folded around the edges of the leg openings of wearer's underpants. Widlund discloses that the flaps are joined with their free edge parts extending inwardly over the absorbent pad on the side of the casing remote from the wearer when the article is in use (column 2, lines 44-47), therefore the side flaps have a predisposition to assume the in-use position, away from the wearer. Widlund also discloses the side flaps, or wrapping elements, can be formed by having the casing sheets extend beyond the side edges of the absorbent core, integral, (column 2, lines 19-23) or the side flaps can be separate elements from the main body portion and are

attached along the longitudinal edge of the garment wearing casing sheet (Figure 3). Widlund discloses the wrapping elements having fold lines (6,7) where the wrapping elements and the main body portion are severed (Figure 3). Widlund discloses the wrapping elements are less than half the length of the fold lines (6,7) and are relatively in the center of the fold lines (see figure 4&5), therefore it is the examiners opinion that the wrapping elements are being joined at less than 50% of the length of the fold lines. Widlund also further discloses that the part of the edge joins (12, 13) is much longer than the actual join (column 6, lines 31-33), the examiner takes this to mean that the length where the wrapping elements and the main body portion are joined, is much less than the length that they are not, therefore it is the examiner's position that the wrapping elements are only joined at less than 50% of the total length of the longitudinal edge. Widlund discloses the wrapping elements being equipped with adhesive regions (14, 15).

Response to Amendment

4. Applicant's arguments filed 2/21/02 have been fully considered but they are not persuasive.
5. With respect to Applicant's arguments that Widlund reference does not teach the claimed invention due to the fact that the wrapping elements are not integral with the mail body portion of the disposable article: As stated above in the rejection the Widlund reference does in fact teach that the flaps are extensions of the topsheet and backsheet. The 103 rejection that was made in the previous office action was based on the fold lines being curvilinear, that limitation is not in the claim anymore, therefore the examiner now considers Widlund a 102 reference, see rejection above.
